

## Veterinary Biosecurity Protective Apparel Kit

Veterinarians and associated animal health care workers are in contact with some highly contagious diseases. There is a real need for biosecurity to prevent that pathogen from spreading further.

Outbreaks of highly contagious diseases like:

- Equine Rhinopneumonitis (herpes)
- Canine Influenza
- Salmonella
- Equine strangles and others

Veterinarians and staff are at risk of becoming the vehicle that spreads these diseases further. JorVet, in cooperation with input from veterinarians with experience in biosecurity from a leading veterinary school, has developed a protective apparel kit. The kit provides protective apparel and reduces the risk of these dangerous pathogens being spread by the very person responsible for controlling it.

The kit consists of:

- White posewear coveralls with hood and zipper
- Procedure mask with ties
- Disposable blue plastic boots (pr) J-100B
- Disposable purple nitrile gloves (2 pair)
- Alcohol wipes (2)
- Biohazard disposal bag
- Zip lock storage bag with direction

**J-1035 standard size**  
**J-1035xl extra large size**  
**Note: Sizing runs small**
