Concerns with proper fitting of Braun or JorVet suture cassette into JorVet suture cassette holder….

Overview:
The new suture cassette design from Braun features a clear rim versus the older version with a white rim. This slight change has made fitting the cassette into the suture rack a challenge. A couple of suggestions will make these cassettes fit more readily into any existing JorVet cassette holder.

Figure #1. Position the new Braun suture cassette with its back end away from the cap.

Figure #2. Slide cassette with rear portion into cassette rack with gentle push.

Figure #3. Remove the cassette and now insert it straight cap end first position. This approach adjusts the cassette rack holding ‘fingers’ to hold any version of Braun suture cassette.
