External Skeletal Fixation (ESF) Epoxy Putty J-751

This putty offers a quick and simple alternative to standard rod and clamp systems used with external fixators.

The putty, once mixed, stiffens in five minutes and within one hour is fully cured. The putty comes in a round protective resealable tube that is ¾” in diameter. The amount required can be clipped off just like cookie dough. It has a pre-measured catalyst that is activated upon kneading or mixing.

- No liquid and powder mixing required
- No odor
- Immediately very moldable to shape
- Inexpensive compared to clamps/rods

Typical applications:
- Different size pins placed at varying angles
- ESF in very small animals, i.e., guinea pig
- Fractures of the mandible
- Protecting sharp ends of cut pins
- Joining non standard pins and rods
