OPTI-KLENS II™
FACE/EYE WASH FOUNTAIN
INSTALLATION INSTRUCTIONS
Retain For Reference
Please Read All Information Before Installation

Install sign (peel and stick) over your face/eye wash station. Leave the caps on the unit to prevent dust from collecting. The caps will come off with the pressure of the water.

To meet the requirements for an emergency face/eye wash unit, please be sure to mount the unit on a faucet which allows it to measure 33” to 45” from the floor and which can be reached in no more than 10 seconds.

Test unit on a regular weekly basis to verify compliance with ANSI requirements.

STEP I
Remove existing aerator and screw on diverter valve with button facing toward front.

STEP II
Allen screw to tighten nozzle assembly is packaged separately. Insert screw in nozzle assembly, then put assembly in place on diverter.

STEP III
Align nozzle to face toward user on both sides of spout and tighten screw. Be sure to always loosen Allen screw when adjusting or removing face/eye wash unit.

FACTS EMPLOYEES SHOULD KNOW:
A. Where the stations are.
B. How to use the stations.
   1. Use only cool side of mixed faucet to prevent harmful burns and retard chemical reaction rates.
FOR OSHA COMPLIANCE ON INSTALLATION, DELIVERED HOT WATER TEMPERATURE CANNOT EXCEED 100°F.
C. When to use the stations.
Based on medical consultation and industry experience, the recommended time, in most instances, for flushing eyes is 15 minutes while holding eyelids open in clean running water. Always notify medical authorities when someone has been injured.

ALL OF THE OPTI-KLENS® UNITS HAVE BEEN TESTED BY AN OSHA APPROVED INDEPENDENT TESTING LABORATORY, AND HAVE BEEN PROVEN TO MEET ANSI Z358.1 STANDARDS, SHOWING COMPLIANCE TO OSHA REQUIREMENTS.
