CALIBRATION OF THE J0825PM and J0825QM Walk-On Scales

Note: A minimum 25% of scale capacity is needed in order to calibrate the scale.
(Scale capacity up to 250Kgs or 500 lbs)

To escape or abort calibration at any time, press the ZERO/ON/OFF button.

1. Turn on the scale. The indicator goes through a display test. When it becomes stable, you are ready to calibrate the scale.
2. With no weight on the scale, Press the TARE and the ZERO/OFF/ON buttons at the same time and hold until the display shows CAL.-? then release both buttons.
3. Press the TARE button, the display will show the maximum capacity of the scale, follow by CAL.P0 and then 0.0 with the last digit flashing.
4. Press the TARE button, the display will flash and show CAP.P1, you will need to key in a calibration weigh of 125lbs. minimum or the calibration weight that you have. (A minimum 25% of scale capacity is needed in order to calibrate the scale.) Place the weight on the scale and key in your calibration weight from right to left by using the UNIT key to scroll your numbers up/down (↑↓) and use the HOLD/PRINT key to advance you to the left to enter your next number. Do this until the last digit on the left is flashing.
5. With calibration weight still on the scale, press the TARE button, the display will flash and display CAP.P2,. You will then re-enter in your calibration weight from right to left, using the same procedure in STEP 4.
6. Press the TARE button, the display will flash and display CAP.P0. Remove all weight from the scale.
7. Press the TARE button, the display will flash 0.0 and then return to the weigh mode.
8. Your scale is calibrated and should weigh correctly.

If error message CAL.Er appears repeat the procedure again. If this does not work with your scale, please call Jorgensen Technical Support.
To remove the auto off from the J0825PM and J0825QM

1. Turn the scale on and be in the regular weigh mode for the scale.
2. Press and hold down the **ON/OFF/ZERO** and **UNIT** button until the word “SETUP” is displayed. This means the scale is in the set **SETUP mode**.
3. Release the buttons. Your screen will display **P1.05**. This is factory default - 5 minutes of non-use and the scale will turn off.
4. You will want to CHANGE the value to **P1.00** by selecting the **UNIT** button and then scroll through the numbers (↑↓), change to show a value of **00**. If you need to change the second digit to the left, Press the **PRINT** button and scroll through to the proper number selection by selecting the **UNIT** button.
5. Once you see **P1.00** on the screen, then select the **TARE** button. The screen will now display **P2.2**.
6. Select the **ON/OFF/ZERO** to reset the indicator back into the normal weigh mode operation.

NOTE: If you have batteries installed in the indicator, please remove at this time and use the AC adaptor supplied with the scale system.

If you further questions, please contact Jorgensen Technical Support.
