Directions for *VetCite* Use

1.) Apply appropriate stockinette and cast padding over limb (The use of tape “stirrups” is strongly recommended).

2.) Put on latex gloves. A little bit of vaseline on the fingertips will help reduce the tacky feeling of the cast material.

3.) Tear open the aluminum foil pouch.

4.) Immerse the cast material in warm water for 5-10 seconds, gently squeeze to ensure total exposure to water.

5.) Apply tape to limb. Suggest a 50% overlay.

6.) Conform cast with slight pressure, making sure not to leave indentations that will cause pressure sores.
